

# Web Technologies Project

Gema Diaz, Luis Miguel Agüero, Roberto Garcia

02/11/2021

The project consists on a movie rental system. In this webpage you will be able to search, rent and return movies. There is also client management where you can modify, add or delete users and give them a role which will allow them to do different functions.

- Login with JWT (JSON Web Token).
- Different roles: Admin and User.
- Users management: add, delete or modify an user.
- Database with all of the catalogue information and users.
- Movie search with filters.
- Catalogue management: add, delete or modify.
- Rent and return movies.
- The possibility to create a list of your favourite movies.
- Every movie will show all of its data.
- Movie rating.
- Movie ranking based on the rating given by the users.

For the developing of this software we will use java and spring framework for the backend and javascript for the frontend.
